

# 75 years ago,

...an inquisitive fellow came into George Daubert's modest Chicago gas station asking what would keep his steel coils from rusting during storage. Unaware of such a product, George set about mixing and testing various petroleum formulations.

## **By George, he got it right.**

The formula worked. Ongoing innovations ensued. So many in fact that over the course of 75 years, George Daubert's company grew to become a world-leader in corrosion preventives ... and adhesives ... and sealants ... and specialty coatings.

Clearly, a lot has changed since that bellwether day back in 1935, but one thing hasn't: the same basic commitment to understanding customer needs and meeting them is alive and kicking.

It's what started Daubert Chemical, and it's what's made Daubert Chemical the preferred source by engineers in the transportation, heavy industrial, automotive, furniture, appliance industries and many more.

## **Everything Including the Kitchen Sink**

From their simple beginnings on Chicago's north side to their present position as a supplier of complete kitchen products, Elkay has always remained focused on products to serve the changing needs of their customers.

### **But did you know there's a Daubert product in there?**

Perhaps that's why, many years ago, Elkay talked to Daubert chemists about something that could be used on the underside of their kitchen sinks that would dull the sound of utensils when dropped inside. It was a unique feature that helped Elkay continue its customer focus and become a leader in stainless steel sinks, drinking fountains and kitchen cabinets.

**Here's to Elkay Manufacturing Company, enjoying its 90th year anniversary! Daubert is proud to be an Elkay supplier.**

*Daubert Chemical and Elkay Manufacturing. Two Chicago companies with a common commitment: Innovation to meet customer needs. Cake anyone?*
